EV100

Host organization: The Climate Group
Mode covered: Road
Region: Europe, North America, Asia, Oceania, Latin America & Africa.

Objective
EV100 is our global initiative bringing together companies committed to switching their owned and contracted fleets up to 7.5t to zero emission vehicles and installing charging infrastructure for employees and customers by 2030.

Benefits of this initiative
Advocacy, Collaboration, Peer-to-peer learning, Profiling.

How to engage
Please visit https://theclimategroup.tfaforms.net/29.

General Pledge
Electrify 100% vehicles <3.5 tons (~Class 1-2)
Electrify 50% vehicles 3.5 - 7.5 tons (~Class 2-4)
Workplace and/or customer charging in all feasible locations.

Technical Pledge
For the commitment, zero emission vehicles will be understood to include:
- Pure battery vehicles
- Plug-in hybrids
- Extended-range vehicles
- Fuel cell vehicles (green hydrogen)

Related Policy or Advocacy Work
As well as transforming their own operations, EV100 member companies are also engaging in public policy debates around the world to shape public policy frameworks to accelerate the transition to zero emission mobility.
We discuss policy regularly through our Policy Working Groups and work to influence policy frameworks directly in key target geographies in Europe, the North America, Latin America and Asia. This engagement and feedback informs our calls for the government measures and interventions which will make EVs more affordable, available and practical in the short term.
