Programa Transporte Limpio

Website: https://www.gob.mx/semarnat/acciones-y-programas/programa-transporte-limpio-190236

Host organization: SEMARNAT (Secretaría de Medio Ambiente y Recursos Naturales)
Mode covered: -
Region: México

Objective
Make freight transport that circulates throughout the country more efficient, safe, competitive, and environmentally friendly.

Benefits
That the companies reduce: fuel consumption, transportation operational costs and polluting emissions into the atmosphere.

How to engage
Transporte Limpio is a voluntary program. Companies only have to send us a letter of adhesion to participate in the Program. Annually, they have to send us technical information on their fleets, such as: number of units, kilometers traveled, fuel consumption, tons transported, among others.

General Pledge
Companies must send us their fleet information annually.

Technical Pledge
Companies must try to adopt strategies or technologies to reduce fuel consumption, but it is not a mandatory requirement that they use some technologies since, being a voluntary program, companies decide how they reduce fuel consumption and emissions.

Related policy or advocacy work
For several years we have worked closely with the SmartWay program from the United States and Canada.
